Professional Summary

Technical support professional with five years at Accenture supporting production environments for large enterprise clients, including Deutsche Bank, National Australia Bank and Transurban. Experienced in handling incident tickets, finding the root cause of problems, and explaining technical issues in clear, plain language. Holds Databricks and Splunk certifications. Seeking a part-time customer support role where I can help customers resolve issues quickly and professionally.

Core Skills

- Daily communication with clients: regular updates, questions and follow-ups while supporting their systems
- Customer and technical support: incident ticket handling, troubleshooting, root cause analysis and fast resolution
- Ticket and issue tracking: ServiceNow, Jira, Confluence
- Clear written communication, documentation and knowledge sharing
- Explaining technical problems in plain language to non-technical users and stakeholders
- Problem solving, accuracy and patience under pressure
- Teamwork: backup support for other teams, handoffs and escalation between support levels
- Reliable delivery: tasks completed on time against Jira boards and client requirements
- Working independently and with distributed teams across time zones
- Technical tools: Splunk, OpenSearch, Python, SQL, Databricks, GitLab, Bitbucket, Linux, AI assistants (Claude, ChatGPT, Copilot, Gemini)

Work Experience

Software Engineer, Accenture Inc. (August 2021 to Present)

Databricks Data Engineer Senior Analyst (current project)

- Moving into a Databricks data engineering project, supporting data pipelines and reliability.

Splunk and OpenSearch Developer, National Australia Bank (2025 to 2026)

- Migrated Splunk dashboard panels to OpenSearch and built complete dashboards, from queries to panel configuration, so teams could keep using their reports.
- Checked data accuracy and consistency between both environments to keep reporting reliable.
- Talked with the client from time to time to confirm requirements, share progress and clarify questions.

CloudChaser Developer, GenWizard (2024 to 2025)

- Built a Microsoft Teams chatbot that supports client engagement and gives employees quick responses, including notices of their roll-in and roll-off dates.
- Added features with Python and React.js and deployed applications on GitLab.

Splunk Administrative Support, Deutsche Bank (2022 to 2024)

- Provided production support: investigated and documented data problems, then troubleshot and resolved issues with data ingestion, search performance and system errors.
- Communicated with the client daily and kept in regular contact while supporting them, giving updates on issues, fixes and next steps.
- Deployed fixes across Dev, UAT and Prod environments and supported production log validation based on client requirements.
- Carried out daily environment health checks and validated incident review dashboards in Splunk Enterprise Security.

Splunk Developer, Transurban (2021 to 2022)

- Checked ServiceNow incident tickets and provided immediate solutions.
- Talked with the client and teammates from time to time while supporting them, to clarify issues and confirm fixes.
- Gave backup support to other teams, helping them solve their problems.
- Completed assigned tasks on time on the Jira board.
- Built dashboards, reports and alerts for operational and security analytics.

Award: LIKHA, Data and AI Awards (Drives Innovation for Positive Change)

- Created a single-landing-page dashboard that brings all investigation queries together, plus a dashboard and alert that helped other teams monitor data and reduce manual checking.
